Who we are

- LogosNet Services LTD was founded in 1995 and it was the first Internet Service (ISP) and Network Solutions Provider entering the Cyprus market.
- The company caters the needs of both the end-user as well as the corporate/government sector with a complete range of Information Technology services and solutions which are innovative, technologically advanced, secured, scalable, productive and effectively supported by our highly qualified professionals.
- Through a number of strong strategic alliances with global technological leaders, Logosnet Services LTD is poised to offer the most high-end and effective e-business solutions by remaining abreast of latest technology advancements and gaining access to the necessary technological insight, professional training and support.
- Logosnet premises and primary hosting service facilities are located in Nicosia, the Capital of Cyprus and the center of operations for organizations and institutions of the local corporate / business, government and educational sectors. Logosnet carrier neutral Data centers are providing access to all local fiber optic network operators via diversified protected routes from multiple entrances and ducts. The advanced wireless and satellite infrastructure will accommodate all customers' needs for redundancy and business continuity.
- Logosnet was selected by global international carriers to provide them with all necessary telehouse services for establishing their PoP (Point of Presence) in Cyprus enabling them to expand their operations to the local market and the EMEA region.

What we do

- **Connectivity Services**
 - Internet Services
 - Local Traffic
 - Local & International Network Connections
 - IP Lease Services
- **SLAs**
 - We provide our customers with a full 24/7 Managed Service for all our infrastructure services with SLAs up to 99,99%
- **Telephony Services**
 - Local and International Call Termination
 - SIP Trunks
 - PBX Solutions
- **Media services**
 - Live Streaming and VOD Services
 - Teleport Services
 - Satellite Video Contribution
- **Marketing Services**
 - Bulk SMS
 - Digital and Media Advertising
- **Hosting Services**
 - Telehousing Services
 - Cloud (VMWare and KVM)
 - Colocation
 - Server Hosting
 - Web & Email Hosting
 - Hosted Exchange
 - Office 365
- **Managed Services**
 - External IT Services
 - HotSpots
 - Monitoring of Networks and terminals
 - Hardware provisioning, configuration and installation
 - Virtual Office Services
- **Development Services**
 - Website design and development
 - CMS development
- **Security Services**
 - Cloud Storage Solutions
 - Parental Control and monitoring of Internet access
 - Security Network and terminal monitoring
 - Anti-virus services
 - Disaster Recovery Services

Datacenter

In our state-of-the-art and energy-efficient TIER III Data Centers, we provide you with trouble-free and cost-efficient rack hosting for your individual systems in your own secure colocation rack.

All Datacenters are connected to the public grid from 2 directions and have Redundant Fiber Connectivity. Power Generators and Cooling have N+1 Redundancy.

All access is monitored by CCTV, Security Guards, and Card/Biometric means to ensure the best Security of the facilities.

LogosNet Cloud

Welcome to the cloud! Our Public Cloud Platform LogosNet Cloud is a pure public cloud environment that allows users to purchase resources rather than just traditional individual virtual servers. Users can launch instances in seconds with a variety of operating systems and assign vCPU/vRAM and Storage according to their needs. When the vps is no longer needed, then the user can destroy the instance and reclaim the resources for use at another vps.

LogosNet Cloud is KVM based virtualization with a self service user interface that allows users to fully manage their virtual servers and resources.

LogosNet Cloud nodes are located in Cyprus, Athens and Central Europe. Our services are fully compliant with all EU regulations and laws.

White Label

One of the great advantages of LogosNet Cloud is that it allows resellers/partners to purchase resources and re-sell them with their own brand and logo if they so desire. LogosNet Cloud has API and WHMCS module available so it can be integrated into most popular billing and online ordering applications used by hosting companies around the world.

VMware™ Cloud

Our VMware Platform is available in all our datacenters and provides unparalleled performance, stability and scalability for the Enterprise Cloud.

All our infrastructure runs on ESXi Enterprise Plus that provides the full functionality and advanced features of the VMware ecosystem. Standard features include High Availability, DRS, VDP as well as Site Replication.

Storage features RAID10 performance and redundancy on SATA/SAS and SSD drives. Management options include VCenter and our Front End VMT interface that provides full control of the virtual machines and infrastructure.

Dedicated Servers

SUPERMICR●

Bare Metal servers are the core of any cloud platform. They provide absolute control of their resources and can run any OS such as Windows or Linux but can also be used as hypervisors for any virtualization platform. Our standard product line features inexpensive Intel servers as well as high end machines with multiple CPUs and large capacity of RAM and Storage. Network connectivity starts from 100Mbps up to 10Gbps and Storage is available with SATA III as well as SSD drives.

We provide only quality brands such as Supermicro, Dell and HP that guarantee the best performance and reliability and we use Cisco Switches for network connectivity.

For Private Cloud environments we can also provide customer specific hardware to meet the individual demands for your infrastructure.

Partners

We have strategic partnership with leading industry Vendors, delivering top quality products and services to our customers.

We currently hold certifications for Cisco (CCDP, CCNP & CCNA), and Checkpoint CCSE. We are IBM, Cisco and Microsoft Partners (SPLA) We work with Vmware, HyperV virtualization platforms and Zabbix for Alerting and Monitoring.

Service and support

We believe that Client Service and Support are the single most important factor that distinguishes us from the competition and that user experience for our customers should be nothing less than Excellent!

We provide our customers with Operations, Architecture, Design and Migration support as well as Dedicated Account Managers who have full knowledge of the client infrastructure and special requirements.
